## Abstract

The Mulatu numbers were introduced by Mulatu Lemma in [1]. The Mulatu numbers are integral sequences of numbers of the form: **4, 1, and 5,6,11,17,28,45...** These numbers have wonderful and amazing properties and patterns.

In mathematical terms, the sequence of the Mulatu numbers is defined by the following recurrence relation:

$$M_n := \begin{cases} 4 & \text{if } n=0; \\ 1 & \text{if } n=1; \\ M_{n-1} + M_{n-2} & \text{if } n > 1. \end{cases}$$

The first number of the sequence is 4, the second number is 1, and each subsequent number is equal to the sum of the previous two numbers of the sequence itself. That is, after two starting values, each number is the sum of the two preceding numbers. In [1] some properties and patterns of the numbers were considered. In this paper, we more deeply examine additional properties and patterns of these fascinating and mysterious numbers. Many beautiful mathematical identities involving the Mulatu numbers, the Fibonacci numbers and the Lucas numbers will be explored.

2000Mathematical Subject Classification: 11

## Keywords

Mulatu numbers, Mulatu sequences, Fibonacci numbers, Lucas numbers, Fibonacci sequences, and Lucas sequences.

**Introduction and Background:** As given in [1], the Mulatu numbers are a sequence of numbers recently introduced by Mulatu Lemma, an Ethiopian Mathematician and Distinguished Professor of Mathematics at Savannah State University, Savannah, Georgia, and USA. The Mulatu sequence has wealthy mathematical properties and patterns like the two celebrity sequences of Fibonacci and Lucas.

In this paper, more interesting relationships of the Mulatu numbers to the Fibonacci and Lucas numbers will be presented.

Here are the First 21 Mulatu, Fibonacci, and Lucas numbers for quick reference.

**Mulatu( $M_n$ ), Fibonacci( $F_n$ ) and Lucas( $L_n$ ) Numbers**

**( Tables 1 &2)**

**Table 1**

<b>n:</b>	<b>0</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>
$M_n$ :	4	1	5	6	11	17	28	45	73	118	191	309
$F_n$ :	0	1	1	2	3	5	8	13	21	34	55	89
$L_n$ :	2	1	3	4	7	11	18	29	47	76	123	199

**Table 2**

<b>n:</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>	<b>16</b>	<b>17</b>	<b>18</b>	<b>19</b>	<b>20</b>
$M_n$	500	809	1309	2118	3427	5545	8972	14517	23489
$F_n$ :	144	233	377	610	987	1597	2584	4181	6765
$L_n$ :	322	521	843	1364	2207	3571	5778	9349	15127

**Remark:** Throughout this paper M, F, and L stand for Mulatu numbers, Fibonacci numbers, and Lucas number respectively.

The following well-known identities of Mulatu numbers [1], Fibonacci numbers, and Lucas numbers are required in this paper and hereby listed for quick reference.

- (1)  $L_n = F_{n-1} + F_{n+1}$
- (2)  $F_{n+1} = F_n + F_{n-1}$
- (3)  $M_n = L_n + 2F_{n-1}$
- (4)  $F_{2n} = F_n L_n$
- (5)  $5F_n^2 - L_n^2 = 4(-1)^{n+1}$

- (6)  $F_n = \frac{L_{n+1} + L_{n-1}}{5}$
- (7)  $L_{n+1} = L_n + L_{n-1}$
- (8)  $F_{n+k} = F_{n-1}F_k + F_nF_{k+1}$
- (9)  $M_{-n} = (-1)^n M_n$
- (10)  $L_{n+m} = \frac{5F_nF_m + L_nL_m}{2}$

**The Main Results:**

**Theorem 1.**

$$M_n^2 - M_{n+1}^2 - M_{n-1}^2 + 2M_{n+1}M_{n-1} = 0$$

**Proof:** The proposition easily follows using the recurrence formula

$$M_{n+1} = M_n + M_{n-1}$$

**Theorem 2.**

$$M_n = 4F_{n-1} + F_n$$

**Proof:** Theorem 9 [1] implies that  $F_{n-1} = \frac{M_n - F_{n+1}}{3}$ . Thus we have

$$3F_{n-1} + F_{n+1} = M_n \Rightarrow M_n = 4F_{n-1} + F_n$$

**Theorem 3.**

$$M_{n+2} = 7F_{n+1} - L_n$$

**Proof:** Note that from above  $F_n = \frac{L_{n+1} + L_{n-1}}{5}$

$$\Rightarrow 5F_{n-1} = L_n + L_{n-2} = (M_n - 2F_{n-1}) + L_{n-2}$$

$$\Rightarrow 7F_{n-1} - L_{n-2} = M_n$$

$$\Rightarrow M_{n+2} = 7F_{n+1} - L_n$$

**Theorem 4.**

(a) If  $M_n$  is divisible by 2, then  $M^2_{n+1} - M^2_{n-1}$  is divisible by 4

(b) If  $M_n$  is divisible by 3, then  $M^3_{n+1} - M^3_{n-1}$  is divisible by 9.

**Proof:** Note that:

$$\begin{aligned} \text{(a)} \quad & M^2_{n+1} - M^2_{n-1} \\ &= (M_{n+1} - M_{n-1})(M_{n+1} + M_{n-1}) = M_n (M_n + M_{n-1} + M_{n-1}) = M^2_n + 2M_n M_{n-1}. \end{aligned}$$

Now it is easy to see that if  $M_n$  is divisible by 2, then  $M^2_{n+1} - M^2_{n-1}$  is divisible by 4

$$\begin{aligned} \text{(b)} \quad & M^3_{n+1} - M^3_{n-1} = (M_{n+1} - M_{n-1})(M^2_{n+1} + M_n M_{n-1} + M^2_{n-1}) \\ &= M_n (M^2_{n+1} + M_{n+1} M_{n-1} + M^2_{n-1}) \\ &= M_n ((M_n + M_{n-1})^2 + M_{n-1}(M_n + M_{n-1}) + M^2_{n-1}) \\ &= M_n (M^2_n + 3M_n M_{n-1} + 3M^2_{n-1}) \\ &= M^3_n + 3M^2_n M_{n-1} + 3M_n M^3_{n-1} \end{aligned}$$

Hence  $M_n$  is divisible by 3  $\Rightarrow M^3_{n+1} - M^3_{n-1}$  is divisible by 9.

**Theorem 5.** The addition formula for **Mulatu** numbers.

$$M_{n+k} = F_{n-1}M_k + F_n M_{k+1}$$

**Proof:** By Theorem 8[1] we have,

$$M_n = F_{n-3} + F_{n-1} + F_{n+2}.$$

Hence it follows that

$$M_{n+k} = F_{n+k-3} + F_{n+k-1} + M_{n+k+2}.$$

Now using the addition formula for **Fibonacci** numbers given above, it follows that

$$\begin{aligned} M_{n+k} &= (F_{n-1}F_{k-3} + F_n F_{k-2}) + (F_{n-1}F_{k-1} + F_n F_k) + (F_{n-1}F_{k+2} + F_n F_{k+3}) \\ &= (F_{n-1}F_{k-3} + F_{n-1} + F_{k-1} + F_{n-1}F_{k+2}) + (F_n F_{k-2} + F_n F_k + F_n F_{k+3}) \end{aligned}$$

$$\begin{aligned}
 &= F_{n-1} (F_{k-3} + F_{k-1} + F_{k+2}) + F_n (F_{k-2} + F_k + F_{k+3}) \\
 &= F_{n-1} M_k + F_n M_{k+1}.
 \end{aligned}$$

Hence the theorem is proved.

**Theorem 6:**

$$M_{2n-1} = F_{2n} - 3F_{n-1}^2 + 6F_n F_{n-1}$$

**Proof:** By Theorem 3 we have,

$$\begin{aligned}
 M_{2n-1} &= M_{n+(n-1)} = F_{n-1} M_{n-1} + F_n M_n \\
 &= F_{n-1} M_{n-1} + F_n (L_n + 2F_{n-1}) \\
 &= F_{n-1} M_{n-1} + F_n L_n + 2F_n F_{n-1} \\
 &= F_{n-1} M_{n-1} + F_{2n} + 2F_n F_{n-1}.
 \end{aligned}$$

Now applying *Theorem 3* to  $M_{n-1}$ , we have

$$\begin{aligned}
 M_{n-1} &= M_{(n-1)+0} = F_{n-2} M_0 + F_{n-1} M_1 = 4F_{n-2} + F_{n-1} \text{ and} \\
 4F_{n-2} + F_{n-1} &= 4(F_n - F_{n-1}) + F_{n-1} = -3F_{n-1} + 4F_n.
 \end{aligned}$$

Hence,  $M_{2n-1} = F_{2n} + F_{n-1} (-3F_{n-1} + 4F_n) + 2F_n F_{n-1} = F_{2n} - 3F_{n-1}^2 + 6F_n F_{n-1}$

**Theorem 7.** The Subtraction formula for **Mulatu** numbers

$$M_{n-k} = 4F_{n-k+1} - 3F_{n-k}$$

**Proof:**  $M_{n-k} = M_{(n-k)+0}$  and hence by Theorem 3, we have

$$\begin{aligned}
 M_{n-k} &= F_{n-k-1} M_0 + F_{n-k} M_1 \\
 &= 4F_{n-k-1} + F_{n-k} \\
 &= 4(F_{n-k-1} + F_{n-k}) - 3F_{n-k}
 \end{aligned}$$

$$= 4F_{n-k+1} - 3F_{n-k}.$$

**Theorem 8.**

$$F_{2n} - M_n F_{n+1} - F_{n+1} F_n = -L_n^2$$

**Proof:** We use the identities listed above to prove the theorem.

$$\begin{aligned} \text{Note that } F_{2n} - M_n F_{n+1} - F_{n+1} F_n &= F_n L_n - M_n F_{n+1} - F_{n+1} F_n \\ &= F_n (F_{n-1} + F_{n+1}) - F_{n+1} (L_n + 2F_{n-1}) - F_{n+1} F_n \\ &= F_n (F_{n-1} + F_{n+1}) - (F_n + F_{n-1})(L_n + 2F_{n-1}) - F_{n+1} F_n \\ &= F_n (F_{n-1} + F_{n+1}) - (F_n + F_{n-1})(F_{n+1} + F_{n-1} + 2F_{n-1}) - (F_n + F_{n-1})F_n \\ &= F_n (F_{n-1} + F_n + F_{n-1}) - \\ &\quad (F_n + F_{n-1})(F_n + F_{n-1} + F_{n-1} + 2F_{n-1}) - (F_n + F_{n-1})F_n \\ &= F_n (2F_{n-1} + F_n) - (F_n + F_{n-1})(F_n + 4F_{n-1}) - (F_n + F_{n-1})F_n \\ &= 2F_n F_{n-1} + F_n^2 - F_n^2 - 4F_n F_{n-1} - F_n F_{n-1} - 4F_{n-1}^2 - F_n^2 - F_{n-1} F_n \\ &= -F_n^2 - 4F_n F_{n-1} - 4F_{n-1}^2 \\ &= -(F_n^2 + 4F_n F_{n-1} + 4F_{n-1}^2) \\ &= -(F_n + 2F_{n-1})^2 \\ &= -(F_n + F_{n-1} + F_{n-1})^2 \\ &= -(F_{n+1} + F_{n-1})^2 \end{aligned}$$

$$4F_{n-1}^2 = L_n^2.$$

Hence  $M_{2n} = L_n M_n - L_n^2 + 5F_n^2$ . Now using that  $5F_n^2 - L_n^2 = 4(-1)^{n+1}$

it easily follows that  $M_{2n} = L_n M_n + 4(-1)^{n+1}$ .

$$= L_n^2 + 4F_{n-1}^2 + 2F_n F_{n-1} + 4(-1)^{n+1}$$
