## ABSTRACT

The Mulatu numbers were introduced in [1]. The numbers are sequences of numbers of the form: **4, 1, 5, 6, 11, 17, 28, 45...** The numbers have wonderful and amazing properties and patterns.

In mathematical terms, the sequence of the Mulatu numbers is defined by the following recurrence relation:

$$M_n := \begin{cases} 4 & \text{if } n = 0; \\ 1 & \text{if } n = 1; \\ M_{n-1} + M_{n-2} & \text{if } n > 1. \end{cases}$$

The double Angel Formulas for Fibonacci and Lucas numbers are given by the following formulas respectively.

$$(1) F_{2n} = F_n L_n \text{ and } (2) L_{2n} = \frac{5F_n^2 + L_n^2}{2}$$

Since both the Fibonacci and Lucas numbers have double angle Formulas, It is natural to ask if such formula exist for Mulatu Numbers. The answer is affirmative and produces the following paper.

**2000 Mathematical Subject Classification: 11**

## KEYWORDS

Mulatu numbers, Mulatu sequences, Fibonacci numbers, Lucas numbers, Fibonacci sequences, and Lucas sequences.

### 1. Introduction and Background

In his As given in [1], the Mulatu numbers are a sequence of numbers recently introduced by Mulatu Lemma, Professor of Mathematics at Savannah State University, Savannah, Georgia, USA. The Mulatu sequence has wealthy mathematical properties and patterns like the two celebrity sequences of Fibonacci and Lucas.

In this paper, more interesting relationships of the Mulatu numbers to the Fibonacci and Lucas numbers will be presented.

Here are the First 21 Mulatu, Fibonacci, and Lucas numbers for quick reference.

**Remark 1:** Throughout this paper M, F, and L stand for Mulatu numbers, Fibonacci numbers, and Lucas number respectively.

The following well-known identities of Mulatu numbers, Fibonacci numbers, and Lucas numbers are required in this paper and hereby listed for quick reference.

$$(1) L_n = F_{n-1} + F_{n+1}$$

$$(2) F_{n+1} = F_n + F_{n-1}$$

$$(3) F_{2n} = F_n L_n$$

$$(4) L_{2n} = F_n + 2F_{n-1}$$

$$(5) F_n = \frac{L_{n+1} + L_{n-1}}{5}$$

$$(6) L_{n+1} = L_n + L_{n-1}$$

$$(7) F_{n+k} = F_{n-1}F_k + F_nF_{k+1}$$

$$(8) 5F_n^2 - L_n^2 = 4(-1)^{n+1}$$

$$(9) L_{n+m} = \frac{5F_nF_m + L_nL_m}{2}$$

$$(10) M_{n+k} = F_{n-1}M_k + M_{k+1}F_n$$

### The Main Results

We will state the following theorem proved in [1] as proposition 1 and use it.

**Proposition 1.**  $M_n = F_{n-3} + F_{n-1} + F_{n+2}$

**Theorem 1:** The following are equivalent.

- (1)  $M_n$
- (2)  $F_{n-3} + F_{n-1} + F_{n+2}$
- (3)  $L_n + 2F_{n-1}$
- (4)  $F_n + 4F_{n-1}$
- (5)  $4F_{n+1} - 3F_n$

**Proof:** We will show that (1)  $\Rightarrow$  (2)  $\Rightarrow$  (3)  $\Rightarrow$  (4)  $\Rightarrow$  (5)  $\Rightarrow$  (1)

- (i) (1)  $\Rightarrow$  (2) follows by Proposition 1.
- (ii) (2)  $\Rightarrow$  (3) follows as shown:

$$\begin{aligned}
 F_{n-3} + F_{n-1} + F_{n+2} &= F_{n-3} + F_{n-1} + F_{n+1} + F_n \\
 &= F_{n-3} + F_{n-1} + F_{n+1} + F_{n-1} + F_{n-2} \\
 &= F_{n-1} - F_{n-2} + F_{n-1} + F_{n+1} + F_{n-1} + F_{n-2} \\
 &= 2F_{n-1} + L_n
 \end{aligned}$$

- (iii) (3)  $\Rightarrow$  (4) follows as shown:

$$\begin{aligned}
 L_n + 2F_{n-1} &= F_{n+1} + F_{n-1} + 2F_{n-1} \\
 &= F_n + F_{n-1} + F_{n-1} + 2F_{n-1} \\
 &= F_n + 4F_{n-1}
 \end{aligned}$$

- (iv) (4)  $\Rightarrow$  (5) follows as shown:

$$\begin{aligned}
 F_n + 4F_{n-1} &= F_n + 4(F_{n+1} - F_n) \\
 &= 4F_{n+1} - 3F_n
 \end{aligned}$$

(v) (5)  $\Rightarrow$ (1) follows as shown:

$$\begin{aligned}
 4F_{n+1}-3F_n &= 4F_{n+1}-3(F_{n+1}-F_{n-1})= F_{n+1}+3 F_{n-1}= F_{n+1}+ F_{n-1}+ F_{n-1}+ F_{n-1} \\
 &= F_{n+1}+ (F_n - F_{n-2})+ F_{n-1}+F_{n-3}+F_{n-2}= F_{n+1}+ F_n - F_{n-2}+ F_{n-1}+F_{n-3}+F_{n-2} \\
 &= F_{n+2}+ F_{n-1}+ F_{n-3}=M_n \text{ by Proposition 1 and hence) (5) } \Rightarrow \text{(1). Thus the theorem} \\
 &\text{is proved.}
 \end{aligned}$$

**Theorem 2.**

$$L_{2n} + 2F_{2n-1} = M_n L_n + 5F_n^2 - L_n^2$$

Note that Using (9) above, we have  $L_{2n} + 2F_{2n-1} = \frac{5F_n^2 + L_n^2}{2} + 2F_n^2 + 2F_{n-1}^2 =$

$$\frac{9F_n^2 + L_n^2 + 4F_{n-1}^2}{2}.$$

Now Observe that

$$\begin{aligned}
 \frac{9F_n^2 + L_n^2 + 4F_{n-1}^2}{2} &= \frac{5F_n^2 + L_n^2}{2} + 2F_n^2 + 2F_{n-1}^2 \\
 = L_{2n} + 2F_{2n-1} &= F_{2n} + 2F_{2n-1} + 2F_{2n-1} = F_n L_n + 4F_{2n-1} \\
 &= F_n (F_n + 2F_{n-1}) + 4F_{n-1}^2 + 4F_n^2 = 5F_n^2 + 4F_{n-1}^2 + 2F_{n-1} F_n = \\
 &= (F_n^2 + 8F_{n-1}^2 + 6F_{n-1} F_n) + 5F_n^2 - (F_n^2 + 4F_{n-1} F_n + 4F_{n-1}^2) \\
 &= (F_n + 4F_{n-1})(F_n + 2F_{n-1}) + 5F_n^2 - (F_n + 2F_{n-1})^2 \\
 &= M_n L_n + 5F_n^2 - L_n^2
 \end{aligned}$$

**Theorem3.**  $M_{2n} = M_n L_n + 5F_n^2 - L_n^2$

Note that

$$\begin{aligned}
 M_n L_n + 5F_n^2 - L_n^2 &= M_n L_n - L_n^2 + 5F_n^2 \\
 &= M_n L_n - (F_n + 2F_{n-1})^2 + 5F_n^2 \\
 &= M_n L_n - (F_n^2 + 4F_{n-1} F_n + 4F_{n-1}^2) + 5F_n^2 \\
 &= M_n L_n - (F_n + F_{n-1})(F_n + 4F_{n-1}) + F_n F_{n-1} + 5F_n^2 \\
 &= M_n L_n - F_{n+1} M_n + F_n F_{n-1} + 5F_n^2 \\
 &= M_n (L_n - F_{n+1}) + F_n (F_{n-1} + 5F_n) \\
 &= M_n F_{n-1} + F_n M_{n+1} \\
 &= M_{n+n} = M_{2n}, \text{ by (10) above}
 \end{aligned}$$

**Theorem 4.**

$M_{2n} = M_{2n} = M_n L_n + 5F_n^2 - L_n^2 = M_n L_n + 4(-1)^{n+1}$ , using (8) above. Hence, the theorem follows.

**Theorem 5.**

- (a) If  $M_n$  is divisible by 2, then  $M_{n+1}^2 - M_{n-1}^2$  is divisible by 4
- (b) If  $M_n$  is divisible by 3, then  $M_{n+1}^3 - M_{n-1}^3$  is divisible by 9.

**Proof:** Note that: Using  $M_{n+1} = (M_n + M_{n-1})$ , we have:

$$\begin{aligned}
 \text{(a)} \quad M_{n+1}^2 - M_{n-1}^2 &= (M_{n+1} - M_{n-1})(M_{n+1} + M_{n-1}) = M_n (M_n + M_{n-1} + M_{n-1}) = M_n^2 + 2M_n M_{n-1}.
 \end{aligned}$$

Now it is easy to see that if  $M_n$  is divisible by 2, then  $M_{n+1}^2 - M_{n-1}^2$  is divisible by 4

$$\begin{aligned}
 \text{(b)} \quad M_{n+1}^3 - M_{n-1}^3 &= (M_{n+1} - M_{n-1})(M_{n+1}^2 + M_n M_{n-1} + M_{n-1}^2) \\
 &= M_n (M_{n+1}^2 + M_{n+1} M_{n-1} + M_{n-1}^2) \\
 &= M_n ((M_n + M_{n-1})^2 + M_{n-1} (M_n + M_{n-1}) + M_{n-1}^2) \\
 &= M_n (M_n^2 + 3M_n M_{n-1} + 3M_{n-1}^2)
 \end{aligned}$$

$$= M_n^3 + 3M_n^2M_{n-1} + 3M_nM_{n-1}^3$$

Hence  $M_n$  is divisible by 3  $\Rightarrow M_{n+1}^3 - M_{n-1}^3$  is divisible by 9.

### **Notable Honor and Dedication**

This interesting paper is in an honor of the 2021 Black History Month and is also notable dedicated Professor Darrell Deloach who recently passed away. Professor Deloach was an outstanding professor of the SSU Math Department and he is always remembered. Let him rest in peace.
